Abstract

We present a genome study to identify trends in talents, ability, and performance over multiple generations.

Prepare a short skit, to be performed at HQ, which includes at least six of the following talents:

- contradancing
- dividing by zero (we can provide staff if needed)
- mood loquacious
- rubik's-cubing
- singing
- solving a math problem
- wearing a sarong
- xtreme lifting of campers

This “puzzle” may replace any single (non-meta) puzzle of your choice: once you have performed for us, and any time thereafter, you may cash in this talent show for one (1) answer, in either round of puzzles.
